

SESSION_01

Q.1 Write a short paragraph in your own words defining what a 'program' is and give one real-life example from any app you use daily (like Instagram, Zomato, or Paytm).

A.1 A **program** is a set of instructions written in a programming language that tells a computer or mobile device what to do. For example, in **Zomato**, a program allows us to search for restaurants, select food items, add them to the cart, make payment, and track the food delivery.

Q.2 List three popular programming languages you have heard of, and for each, mention whether it is usually compiled, interpreted, or can be both.

A.2 Java-----> Compiled.
Python-----> Interpreted.
JavaScript-----> Interpreted.

Q.3 Write down the steps (as an algorithm, using simple numbered instructions) for ordering food on Swiggy — from opening the app to completing payment.

Start

- Open the **Swiggy** app.
- Enter or select your **delivery address**.
- Search for a **restaurant or food item**.
- Select a restaurant.
- Choose the food items you want to order.
- Add the selected items to the **cart**.
- Open the cart and check your order
- Confirm the **delivery address**.

SESSION_01

- Apply a coupon or discount, if available.
- Select a **payment method**.
- Click on **Proceed to Pay**.
- Complete the payment.
- Check whether the payment was **successful**.
- If the payment fails, try the payment again using the same or another payment method.
- If the payment is successful, the order is **confirmed**.

End

Q.4 Write down the steps (as an algorithm, using simple numbered instructions) for ordering food on Swiggy — from opening the app to completing payment.

A.4 https://lucid.app/lucidchart/51c3c091-9625-459d-9879-97cc575693dd/edit?viewport_loc=-805%2C32%2C4893%2C2653%2C0_0&invitationId=inv_3dccf15f-7320-44d5-96d7-
