

SESSION_05

Q.1 Create a simple IPL Fan Bot that takes your favorite IPL team name as input and uses if-else-if statements to print a unique cheer message for each team (e.g., 'Go Mumbai Indians!', 'Chennai Super Kings for the win!'). If the team is not recognized, print 'Team not found!'

A.1

```
#include <stdio.h>
#include <string.h>

int main() {
    char team[50];
    printf("Enter your favorite IPL team: ");
    scanf("%s", team);

    if (strcmp(team, "Mumbai") == 0)
    {
        ("Go Mumbai Indians!\n");
    }
    else if (strcmp(team, "Chennai") == 0)
    {
        printf("Chennai Super Kings for the win!\n");
    }
    else if (strcmp(team, "Bangalore") == 0)
    {
        printf("Go Royal Challengers Bangalore!\n");
    }
    else if (strcmp(team, "Kolkata") == 0)
    {
        printf("Come on Kolkata Knight Riders!\n");
    }
    else
    {
        printf("Team not found!\n");
    }
    return 0;
}
```

SESSION_05

Q.2 Build a Zomato-style food suggestion tool: take the user's preferred meal time ('breakfast', 'lunch', 'dinner', or 'snack') and use a switch-case statement to suggest a popular dish for that time. If the input doesn't match any meal, suggest 'Try some fruits!'.

```
A.2      #include <stdio.h>
          #include <string.h>

          int main() {
              char meal[20];

          printf("Enter meal time: ");
          scanf("%s", meal);

              if (strcmp(meal, "breakfast") == 0)
          {
              printf("Suggestion: Try some Masala Dosa!\n");
          }
          else if (strcmp(meal, "lunch") == 0)
          {
              printf("Suggestion: Try some Biryani!\n");
          }
          else if (strcmp(meal, "dinner") == 0)
          {
              printf("Suggestion: Try some Paneer Tikka!\n");
          }
          else if (strcmp(meal, "snack") == 0)
          {
              printf("Suggestion: Try some Samosa!\n");
          }
          else
          {
              printf("Try some fruits!\n");
          }
          return 0;
          }
```

SESSION_05

[switch case]

```
#include <stdio.h>
int main() {

    int choice;
    printf("1. Breakfast\n");
    printf("2. Lunch\n");
    printf("3. Dinner\n");

    printf("Enter your choice: ");
    scanf("%d", &choice);

    switch (choice)
    {
        case 1: printf("Suggestion: Try some Masala Dosa!\n");
        break;

        case 2: printf("Suggestion: Try some Biryani!\n");
        break;

        case 3: printf("Suggestion: Try some Paneer Tikka!\n");
        break;

        case 4: printf("Suggestion: Try some Samosa!\n");
        break;
        default: printf("Try some fruits!\n");
    }
    return 0; }
```

Q.3 Create a Flipkart discount calculator that asks the user for the total cart amount. Use nested if statements to check: if amount > 2000, apply 20% discount; else if amount > 1000, apply 10% discount; else, no discount. Print the final amount to pay. Use nested ifs to check each discount slab.

A.3 #include <stdio.h>

SESSION_05

```
int main() {
    float amount, discount, finalAmount;
    printf("Enter total cart amount: ");
    scanf ("%f", &amount);
    if (amount > 2000)
    {
        discount = amount * 20 / 100;
        finalAmount = amount - discount;

        printf("20%% discount applied!\n");
    }
    else
    {
        if (amount > 1000) { discount = amount * 10 / 100;
        finalAmount = amount - discount;
        printf("10%% discount applied!\n");
        }
        else
        {
            discount = 0;
            finalAmount = amount;
            printf("No discount applied.\n");
        }
    }
    printf("Final Amount to Pay: %.2f\n", finalAmount);    return 0;
}
```

Q.4 Write a program that takes a user's age and checks eligibility for three things using if-else statements: if age $\geq$ 18, print 'Eligible for Driving License'; if age $\geq$ 21, also print 'Eligible for Credit Card'; if age $\geq$ 25, also print 'Eligible for Car Rental'. Print all applicable messages for the given age.

A.4 #include <stdio.h>

```
int main()
{
```

SESSION_05

```
int age;

printf("Enter your age: ");
scanf("%d", &age);

if (age >= 18)
{
    printf("Eligible for Driving License\n");

    if (age >= 21)
    {
        printf("Eligible for Credit Card\n");

        if (age >= 25)
        {
            printf("Eligible for Car Rental\n");
        }
    }
}
else
{
    printf("Not eligible for the above services.\n");
}

return 0;
}
```
