

Session_02

Q.1 Open VS Code or DevC++ and create a new file named hello.c. Write a C program that prints 'Hello, Instagram World!' to the console.

A.1 #include <stdio.h>

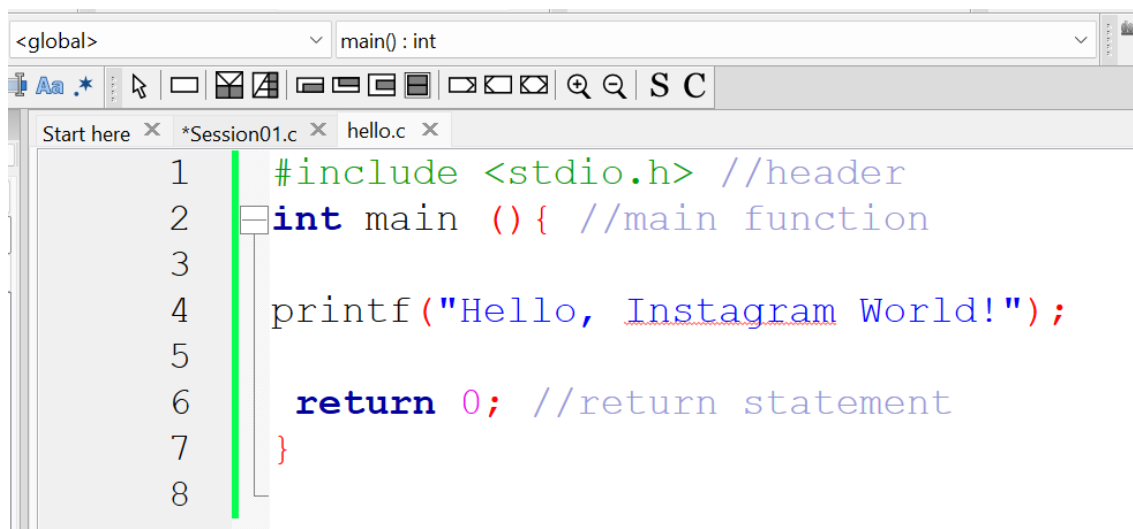

```
int main() {
```

```
    printf("Hello, Instagram World!");
```

```
return 0;
```

```
}
```

Q.2 Identify and label the header, main function, and return statement in your hello.c program using comments.

```
<global> main() : int
#include <stdio.h> //header
int main () { //main function
printf("Hello, Instagram World!");
return 0; //return statement
}
```

A.2

Q.4 Compile your hello.c file using the GCC command line (gcc hello.c -o hello) and run the output file to display the message in your terminal. Hint: On Windows, the output file will be hello.exe; on Linux/Mac, it will be hello.

A.4 Step 1: Compile the program

```
gcc hello.c -o hello
```

Session_02

This creates an executable file.

Step 2: Run the program

On Windows, type: hello Or .\hello.exe

On Linux/Mac, type:

./hello

Output:

Hello, Instagram World!

Final Program

```
#include <stdio.h>
```

```
int main()
```

```
{
```

```
    printf("Hello, Instagram World!");
```

```
    return 0;
```

```
}
```
